SUMMARY

Full-Stack Software Engineer with 2+ years building production SaaS platforms across AI, IoT, and e-commerce domains. Specialized in React.js/Next.js and Django REST Framework, with hands-on experience shipping multimodal LLM pipelines, real-time GPS tracking systems, and multi-tenant B2B platforms with complex RBAC. Comfortable owning features end-to-end — from architecture decisions to deployment

EDUCATION

COMSATS University Islamabad, Lahore **Feb 2020 – Jan 2024**
Bachelor of Science in Computer Science

Punjab Group of Colleges, Pattoki **May 2017 – May 2019**
Pre-Engineering

EXPERIENCE

Software Engineer — Full-Time DevBeings · Lahore Nov 2025 – Present *(joined part-time Sep 2025)*

- Designed and shipped production-grade AI-powered web platforms integrating multimodal LLM pipelines (OpenAI + Gemini) with RAG architectures, private knowledge bases, and longitudinal data processing for clinical and enterprise clients.
- Built real-time IoT SaaS systems handling live GPS data streams, interactive fleet mapping, geofencing automation, and synchronized web-mobile workflows for large enterprise users.
- Owned full product cycles independently system architecture, API design, frontend implementation.
- Collaborated directly with clients to translate business requirements into scalable technical solutions.

Software Engineer 7 Kings Code Private Limited · Lahore Nov 2024 – Nov 2025

- Developed and delivered multiple full-stack web applications for international clients across e-commerce, B2B distribution, and payment processing domains using Next.js, React.js, and Django REST Framework.
- Integrated 5 major payment gateways (Stripe, PayPal, Authorize.net, Square, Clover) and built multi-tenant SaaS architectures with complex role-based access control systems supporting up to 5 distinct user roles.
- Designed and consumed RESTful APIs, implemented JWT authentication, and optimized frontend performance using TanStack Query across multiple production applications.
- Delivered responsive, cross-browser compatible UIs with Tailwind CSS achieving 95%+ mobile responsiveness scores.
- Participated in Agile sprints, conducted code reviews, and maintained production deployments for live client platforms.

TECHNICAL SKILLS

Programming Languages:	JavaScript, Python, C++, C
Front-end Development:	HTML, CSS, React.js, Tailwind CSS, React Native, TanStack Query
Back-end Development:	Node.js, Express.js, RESTful API, MongoDB, Django Rest Framework
Full-stack Frameworks:	MERN Stack
Query languages:	SQL, Postgress SQL

PROJECTS

Medical Fitness Pros– AI Movement Assessment Platform | Link
Tech stack: Next.js, Tailwind CSS, Supabase, TanStack Query, OpenAI, Gemini, LLMs, RAG

- Architected and built an end-to-end AI movement assessment platform — trainers capture client movement videos and images across 5 test types (frontal, sagittal, transverse, golf, single-leg), which are processed by a multimodal LLM pipeline to generate clinical-grade reports
- Built a multimodal LLM pipeline (OpenAI + Gemini) delivering 6 structured outputs per assessment: root-cause analysis, movement observations, corrective recommendations, client summary, physician email report, and AI-generated corrective workout plan.
- Implemented **RAG with a private knowledge base** allowing confidential training and medical documents to improve recommendation accuracy.
- Implemented longitudinal assessment engine — each new client assessment automatically references prior results to improve model accuracy, with side-by-side comparison views for trainers to track progress over time
- Built **physician collaboration workflows** and used **Supabase** for authentication, database management, and media storage.

Altayra– Equipment Tracking & Workforce Management Platform | Link
Tech stack: Next.js, Real-Time GPS Tracking, Geofencing, TanStack Query, supabase , Nest.js

- Built a real-time IoT asset tracking platform for enterprises managing rented heavy machinery — GPS devices are physically mapped to equipment in the portal, broadcasting live location data to an interactive fleet map
- Built a **multi-tenant system** where a super admin can onboard companies and manage role-based access (**Admin, Technician, Standard users**).
- Implemented **device-to-equipment mapping** to track machinery locations live on an interactive map.
- Implemented polygon and circular geofencing with automated email alerts triggered the moment equipment enters or exits any defined zone — giving owners instant breach visibility.
- Enabled **location history tracking** to monitor past movements of equipment.
- Built **inventory management, task creation, and work order systems** for operational workflow management.
- Built a synchronized web-mobile workflow: admins assign work orders on web, technicians receive them instantly on mobile, start shifts, navigate to equipment location, and mark completion — with the web dashboard updating in real time.

NexeraBio – B2B E-Commerce & Order Management Platform | Link
Tech stack: Next.js, Stripe, Role-Based Access Control (RBAC), Multi-Tenant Architecture

- Built a B2B peptide distribution platform supporting 5 user roles (Super Admin, Sub-Admin, Manufacturer, Distributor, Service Provider) with distinct onboarding flows, approval gates, and fully isolated permissions per role.
- Implemented **multi-role architecture** supporting Admin, Distributors, Service Providers, Manufacturers, and Sub-Admins with granular permission controls.
- Enabled **distributors to onboard service providers and place orders on their behalf**, while independent service providers can also register and order directly.
- Engineered a private pricing system where distributors request custom product prices for specific service providers — once admin-approved, these prices are exclusively visible to that pairing and invisible to all other users.
- Developed **end-to-end order workflow**, where admins manage orders and assign them to manufacturers for fulfillment and shipping through a dedicated manufacturer panel.
- Integrated **Stripe** for secure payments and implemented **distributor commission tracking** for each completed order.

MerchantMate – Unified Payment Processing Platform **|** Link
Tech stack: Next.js, Tailwind CSS, TanStack Query, Django

- Built a comprehensive SaaS platform integrating 5 major **payment gateways** (Stripe, PayPal, Authorize.net, Square, Clover).
- Developed invoice generation system with automated email delivery and payment link distribution to end users.
- Created multi-tenant architecture supporting multiple companies with isolated data and custom branding.

Cavayelo USA – Luxury Fragrance E-Commerce Platform | Link
Tech stack: Next.js, Tailwind CSS, Django, TanStack Query

- Developed full-featured e-commerce website for luxury reed diffusers, car air fresheners, and perfumes with 85+ products.
- Built responsive design with Facebook Pixel integration for marketing analytics and conversion tracking.
- Created an admin dashboard for inventory management and order processing.
- Focused on SEO optimization and performance enhancements for a professional web presence.
